SUMMARY

Java Backend Developer with 1 year of professional experience building business management systems using Spring Boot, PostgreSQL, and cloud technologies. Hands-on experience with microservices architecture, concurrent task processing, RESTful API design, unit testing (JUnit/Mockito), and structured logging with SLF4J/Logback. Passionate about backend engineering, distributed systems, and cloud infrastructure. Strong drive to continuously deepen Java core knowledge including concurrency, non-blocking I/O, and scalable system design.

EXPERIENCE

Java Backend Developer (Spring Boot, Microservices, PostgreSQL)

2025 – Present

Boostech Startup

Ho Chi Minh City, Vietnam

- Designed and implemented RESTful APIs and backend business logic using Spring Boot with Dependency Injection and layered architecture.
- Developed project member management modules with role-based access control and permission handling.
- Worked with PostgreSQL for relational data modeling, complex query optimization, and transactional operations.
- Applied multi-threaded processing and concurrent task handling to improve backend throughput for bulk operations.
- Integrated structured logging with SLF4J and Logback to centralize logs and support production troubleshooting across services.
- Wrote unit tests using JUnit and Mockito to ensure correctness of business logic and service layer components.
- Integrated Cloudflare R2 and pCloud for scalable file storage; deployed services on AWS EC2 and Cloudflare Workers.

PROJECTS

Booking Train Ticket Web Application

Oct 2024 – Dec 2024

SGU Personal Project

GitHub

- Integrated OpenFeign for inter-service communication between distributed services.
- Configured Kafka for asynchronous messaging and fault-tolerant event processing.
- Implemented Eureka Service Discovery and API Gateway for service routing and scalability.
- Centralized configuration management using Spring Cloud Config Server.
- Used Flyway for database schema versioning and automated migration management.

TECHNICAL SKILLS

Languages: Java, TypeScript, JavaScript

Backend: Spring Boot, REST API, Dependency Injection, JWT Authentication, Hono

Concurrency: Multi-threading, CompletableFuture, ExecutorService

Messaging: Kafka (async messaging, event-driven processing)

Testing: JUnit, Mockito (Unit Testing)

Logging: SLF4J, Logback (structured logging, log centralization)

Cache: Redis

Database: PostgreSQL, SQL (query optimization, indexing)

Frontend: Next.js, React.js

Cloud / Infra: AWS EC2, Cloudflare Workers, Cloudflare R2, pCloud

Tools: Git, Docker, Linux

Concepts: OOP, Data Structures & Algorithms, Distributed Systems, Microservices, Concurrency Principles

ADDITIONAL INFORMATION

- TOEIC RL: 750
- Strong interest in backend architecture, scalable systems, and cloud infrastructure.
- Regularly practice algorithms and data structures on LeetCode.
- Comfortable working in startup environments and quickly adapting to new technologies.
